

In Week 1, I learned how to use Visual Studio Code and how a basic HTML webpage works. I followed the code provided by our teacher, which displays a heading and a paragraph in the browser. I did not encounter many difficulties because the activity was simple and the instructions were easy to follow. I completed the activity by copying the given code into VS Code and opening the HTML file in my browser to see the output. One thing I improved was my understanding of how HTML tags are used to display text on a webpage. Overall, this activity helped me become more familiar with VS Code and gave me a starting point for learning HTML and web development.
